

MEMORANDUM FOR THE RECORD – 13LGS04

SUBJECT: Emergency Spill to Remove Debris at Little Goose Prior to Installing TSW

Debris in spill bay one at Little Goose Dam interferes with the TSW installation. Approximately 18.5 kcfs of water and 250 cubic yards of debris were spilled through bay 1 on March 27, 2013, from 1320 to 1409 hours. About 500 cubic yards of debris accumulated since then, requiring 15 kcfs of spill through bay 1, from 0732 to 0812 hours, on April 1, 2013. These operations were coordinated through the Reservoir Control Center. The TSW was installed following this morning's spill.
