

**Change Request Number: 11MCN009**

**Date: 01/11/11**

**Proposed by: David Wills**

**Location of Change:** Table MCN-1

**Proposed Change:** Change tables to conform to format and data presented in tables BON-2B and JDA-2.

**Reason for Change:** The lower Columbia tables (BON-2B and JDA-2) present a running 10 year record with information summarized and presented in a format that quickly and easily relates pertinent data. These tables are very useful. The up river project tables only present a running 5 year record with no mid-point of passage, nor medians, minimums or maximums. The FPP should strive to present all FPP data in a consistent, uniform manner that best relates the information useful to the project operators and fish managers.

**Comments from others:**

NOAA- Fredricks would like to see a ten year rolling average for all projects. Delete the BON PH1 table. It is not needed.

**Record of Final Action: approved, with the removal of BON PH1. 21 January 2011. Mackey will put NWW info into NWP format.**
