

FPP Change Form

Change Request Number: 12BON001 Spill Operations Relocated to Appendix E

Date: June 30, 2011

Proposed by: Doug Baus

Location of Change:

2011 FPP

Page: BON-11

Proposed Change:

2.2.2. Juvenile Fish. For spill specific information see Appendix E: Operations Related to Project Spill for Fish Passage. Spill planning dates for juvenile fish passage have a start date of April 10 and end date of August 31. During spring through June 20, the day and night spill amount is 100 kefs. From June 21 through July 31, the daytime spill amount is 85 kefs, and the nighttime spill amount is a level that entrains gas up to the 120% gas cap without exceeding it. From August 1 through August 31, the daytime spill amount is 75 kefs, and the nighttime spill amount is a level that entrains gas up to the 120% gas cap without exceeding it. Minimum spill level is 50 kefs from April 10 through August 31. There is no minimum spill level from September 1 through April 9. See Appendix A for changes in spill volumes for research.

Reason for Change:

This section is inconsistent with the FOP. Details regarding specific spill operations are addressed in "Appendix E: Operations Related to Project Spill for Fish Passage" in the FPP and not in the narrative portion (eg pg BON-11) of the FPP.

Comments from others:

Mackey: ok. Probably should generalize the language. Unless we are at involuntary spill, we won't spill more than 100K during the day due to fallback correct?

Maybe we can state some of the basics (i.e. 100K for adult fallback, min spill volumes) then direct people to App E?

My concern is that the FOP is usually ready after the FPP comes out so minimal guidance is usually helpful for those looking for general guidelines on what spill may be and why. The specifics can certainly be moved.

Those are my suggestions but really, whatever you come up with will be fine.

Tam

Record of Final Action:

Approved at the July 14 FPOM meeting.
